

Please note that the name of the Fund was previously the Pre-Retirement Inflation Linked Fund.
The effective date of the change was 31 December 2022.

Future World Inflation Linked Annuity Aware Fund (charges included)

Unit-Linked Life Insurance [Reported in GBP](#)

FUND AIM

The Fund aims to improve potential outcomes for investors likely to purchase inflation-linked annuities by providing a diversified exposure to assets that reflect the broad characteristics of investments underlying a typical inflation-linked annuity product, incorporating Environmental, Social and Governance ("ESG") considerations as part of the investment strategy.

RISK AND REWARD PROFILE

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

WHO IS THIS FUND FOR?

- The members of UK registered and certain non-UK registered defined benefit or defined contribution occupational pension schemes.
- Although investors can take their money out at any time, the recommended minimum holding period is 5 years.

FUND CHARACTERISTICS

The Fund is invested in corporate bonds and inflation-linked gilts which are constituents of a customised index developed by Solactive AG in conjunction with LGIM, that are expected to broadly track changes in inflation-linked annuity pricing. Companies on the L&G Future World Protection List ("FWPL") are excluded from the initial index universe. The FWPL includes companies that are involved in, or derive parts of their revenues from areas such as controversial weapons and pure coal mining, and certain companies that do not comply with the United Nations Global Compact screening criteria. A summary of the L&G Future World Protection List methodology is available at: www.lgim.com/fwpl. The index provider then 'tilts' the index universe towards companies that demonstrate good ESG efforts and socially responsible policies.

The asset allocation is reviewed quarterly by the LGIM Solutions Team and will evolve over time to reflect changes in annuity pricing, market views of annuity price drivers and changing characteristics of the assets held. The Fund is invested passively towards the customised index, holding the constituents with weightings generally proportionate to that of the index. The Fund will not take short-term, tactical asset allocation positions.

The Fund cannot provide full protection against changes in inflation-linked annuity rates for individual members as these also depend upon a number of other factors (e.g. changes to mortality assumptions).

FUND FACTS

Fund size £324.6m	Base currency GBP	Comparator Inflation Linked Annuity Aware Composite
Launch date Sep 2015	Domicile United Kingdom	

PERFORMANCE (%)

FUND MANAGERS

The Fund's strategic asset allocation is set and maintained by LGIM's Portfolio Solutions team. This team has a wealth of experience and is drawn from financial, actuarial and consultancy backgrounds. They are involved in asset allocation work for a wide range of LGIM's clients, typically large pension and insurance funds.

The Index Fund Management team comprises 25 fund managers, supported by two analysts. Management oversight is provided by the Global Head of Index Funds. The team has average industry experience of 15 years, of which seven years has been at LGIM, and is focused on achieving the equally important objectives of close tracking and maximising returns.

ESG COMMITMENT

From diesel emissions to oil spills, there have been many tangible examples in recent years of how failures in the way companies are run can have a harmful impact on the environment, society and investor returns. We believe responsible investing can mitigate the risk of such outcomes and has the potential to improve returns through the integration of environmental, social and governance (ESG) considerations, active ownership and long-term thematic analysis.

ESG SCORE

We score companies based on environmental, social and governance factors. We use these scores to design ESG-aware tilted indices which invest more in those companies with higher scores and less in those which score lower, while retaining the investment profile of a mainstream index. The ESG Score is aligned to our engagement and voting activities. As a result, this portfolio has an aggregate ESG Score of **66** versus a mainstream index of **59**.

In the fund, we invested more in **284 companies with higher scores** and less in **589 companies with lower scores**.

ENVIRONMENTAL PERFORMANCE

Carbon dioxide (CO₂) is the most significant contributor to greenhouse gas emissions which are driving climate change. Compared to a fund tracking the unadjusted benchmark, the fund will have a different exposure to current and future sources of carbon dioxide emissions.

↓ **57%** Lower carbon reserves intensity than the unadjusted benchmark

CARBON RESERVES INTENSITY

Carbon reserves are fossil fuels (coal, oil and gas) which, if burnt, will become the carbon emissions of the future. To meet global climate change targets, the unabated use of fossil fuels is expected to decline over time.

The figures below are a measure of the size of carbon reserves held by the fund's underlying companies.

374 Fund	880 Benchmark	Tonnes of CO₂eⁱ per \$1 million of enterprise value including cash (EVIC)
--------------------	-------------------------	--

The fund has **57%** lower carbon reserves intensityⁱⁱ compared to a fund tracking the unadjusted benchmark.

The difference in carbon reserves intensity means that for every \$1 million invested in the fund, the exposure to carbon reserves through the underlying companies is reduced by an amount equivalent to **506 tonnes of CO₂e** compared to having invested in the unadjusted benchmark.

↓ **48%** Lower carbon footprint than the unadjusted benchmark

CARBON FOOTPRINT

Following the global Paris Agreement on climate change, companies in all sectors are expected to reduce their emissions to prepare and adapt for a low-carbon economy.

28 Fund	54 Benchmark	Tonnes of CO₂e per \$1 million of EVIC
-------------------	------------------------	--

The fund has **48%** lower carbon footprint compared to a fund tracking the unadjusted benchmark. Carbon footprint describes the relationship between the carbon emissions of a company and its EVICⁱⁱⁱ.

The difference in carbon footprint means that the fund has selected companies where, for the same level of EVIC, the associated emissions^{iv} are lower by **26 tonnes of CO₂e** compared to a fund tracking the unadjusted benchmark^v.

For further information please go to www.lgim.com/esginfo

The proxy benchmark for this fund is .

NOTES

ⁱ Carbon dioxide equivalent (CO₂e) is a standard unit to compare the emissions of different greenhouse gases.

ⁱⁱ This metric looks at the embedded carbon in the fossil fuel reserves owned by a company, divided by a company's enterprise value (including cash), to adjust for company size. This represents a carbon reserves intensity score for a company.

ⁱⁱⁱ The choice of this metric follows best practice recommendations from the **Task Force on Climate-related Financial Disclosures**.

^{iv} Data on carbon emissions from a company's operations and purchased energy is used.

^v This measure is the result of differences in the weights of companies between the index or the fund and the benchmark, and does not depend on the amount invested in the fund. It describes the relative 'carbon efficiency' of different companies in the benchmark (i.e. how much carbon was emitted per unit of sales) or in the fund, not the contribution of an individual investor in financing carbon emissions.

RISK AND REWARD PROFILE

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

KEY RISKS

- The value of an investment and any income taken from it is not guaranteed and can go down as well as up; you may not get back the amount you originally invested.
- The return from your investment is not guaranteed and therefore you may receive a lower or higher return than you anticipated. There will be a variation in performance between funds with similar objectives due to the different assets selected.
- PMC's charges and associated transaction costs are subject to change, with notice for the former and without notice for the latter. Charges and transactions costs deducted from the policy reduce your potential for capital growth in the future.
- Tax rules and the treatment of income and capital gains could change in the future and may be applied retrospectively.
- Inflation reduces the purchasing power of money over time as the cost of purchasing goods and services increases. If the rate of inflation exceeds the rate of return on your portfolio, it will erode the value of your portfolio and its investments in real terms.
- In extreme market conditions it may be difficult to realise assets held for a fund and it may not be possible to redeem units at short notice. We may have to delay acting on your instructions to sell or the price at which you cancel the units may be lower than you anticipated.
- The value of a fund's assets may be affected by uncertainties such as international political developments, market sentiment, economic conditions, changes in government policies, restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investment may be made.
- PMC seeks to mitigate counterparty risk wherever possible on behalf of its policyholders through a variety of measures which include: each fund's non-cash assets being held with independent custodians, sweeping cash (where appropriate) overnight into the LGIM's range of Liquidity funds (above a de minimus level), using the delivery versus payment system when settling transactions and the use of central clearing for exchange traded derivatives and forward foreign exchange transactions. However, in the event of the failure of a counterparty, custodian or issuer there is a residual risk that a fund may suffer asset losses which are unrecoverable.
